Finish all products:

5 star quality:

**Surface buffed to mirror finish (Brushed finish in case of Satin America pattern)
Edges buffed to mirror finish
Inside of fork tines sanded smooth**

Frequently asked questions:

Q: What is the "black substance" in between the fork tines and sometimes on the edges?

A: This is residual buffing compound, basically industrial tooth paste, and is not harmful in any way. In order to protect the health and wellbeing of our customers and employees we do not use dangerous chemicals, such as trichloroethylene, to clean the product after it is buffed. We use a mild soap and water which sometimes does not remove all of the compound, leaving a residual amount on the pieces. As with all flatware we recommend that product be washed prior to the first use and this should remove any compound left on the pieces.
